

DESCRIPTION

A 1-inch trimless drywall channel is a refined architectural element designed to seamlessly integrate lighting into drywall surfaces without visible trims or borders. This channel allows for the installation of LED strip lights, creating a clean, modern look where the light source appears to emerge directly from the wall or ceiling. The trimless design ensures that the channel blends effortlessly with the surrounding drywall, making it ideal for achieving a minimalist aesthetic. Once installed and finished with plaster or joint compound, the channel becomes nearly invisible, highlighting the light itself rather than the fixture. This 1-inch channel is widely used in high-end residential and commercial interiors to deliver a sophisticated, custom-tailored lighting

FEATURES

- 78.5" Length
- 2 x end caps included
- Thermally-balanced design for maximum cooling long-lasting support for your track lighting system.
- Diffuser covers provide smooth light diffusion
- Suitable for 6mm, 8mm, 10mm, and 12mm indoor or outdoor tape
