

## DESCRIPTION

Introducing the 1/2-Inch Mud-In Trimless Channel—a modern and discreet solution for seamless lighting integration. Designed to be embedded into drywall, this channel allows LED strip lights to be installed flush with walls or ceilings, eliminating the need for visible trims. Once finished with plaster or joint compound, the mud-in design creates a smooth, uninterrupted surface where the light appears to emerge directly from the architecture. Ideal for minimalist and contemporary spaces, this trimless channel provides clean, even illumination that enhances the overall aesthetic without drawing attention to the fixture itself. Perfect for both residential and commercial applications.
